For course details kindly refer to **Annexure- A**. Conduction of the course is subject to enrolment of minimum number of students.

Dr. Subhojit Ghosh
Chairman,
CEC NIT, Raipur

ANNEXURE-A

Course Name: Communicative English for Engineering/ Science Graduates

Course Coordinator: Dr. Satveer Singh

Duration of the Course: 45 Hours.

Objectives of the course: The course is specifically tailored to meet the requirement of improving the overall communicational competence of Engineering students. By placing strategic emphasis on areas of language use that draw upon intuitive and functional elements, this course adopts a more practical and performative approach in the service of this goal. To generate an awareness of the communicative contexts in which students generally come to be placed and the specific rhetorical strategies and conversational footwork appropriate for the negotiation of meaning in these contexts. The course broadly aims to make the students more efficient users of language by improving their diction, pronunciation and their grasp of syntax. Most students, despite having a reasonably clear idea of the meaning of a word, hesitate to use it because they are not very confident about the pronunciation. Walter Ong claimed that sound is the “primary habitat of language” and writing is a secondary system of representation. An awareness of the primacy of sounds in the context of everyday communication can help reorient the way students think about language as well as augment their communication skills. The course also aims to illustrate that there is a symmetry between certain situations and the words used in them. An awareness of this symmetry is a necessary precondition to becoming skillful performers in the playground of language.

Learning Outcomes (LO): Upon successful completion of this training programme, the participant will be able to:

- Exhibit active speaking and listening skills.
- Have a better awareness of the rules governing formation of correct sentences.
- Have a better awareness of the underlying principles of common communicative contexts such as interviews, presentations, meetings and group discussions.
- Employ appropriate rhetorical strategies according to the shifting contexts of communication.
- Understand the logical structure of an argument and effectively extract relevant information from spoken and written linguistic samples.
- Become more confident in areas of language use such as pronunciation and diction.
- Articulate themselves more effectively.
- Formulate their ideas in terms of language more effectively.
- Grasp the dynamic relationship between their everyday experience and language u

Course Content

Course Name: Communicative English for Engineering/ Science Graduates

Module I: Language and pronunciation

Phonetic inventory of English: Consonant sounds and Vowel sounds. Intonation, stress patterns and accent. Sounds and memory. Orality vs Literacy. Pronunciation problems associated with second language acquisition. Pronunciation vs definition. Intuition vs understanding. Language Laboratory (06 hours).
